SeaPlaque® GTG® Agarose
For reliable separation and recovery of DNA >1,000 bp.

Introduction
SeaPlaque® GTG® Agarose is a low melting temperature agarose designed for the separation of DNA fragments between 100 bp to 23,000 bp. SeaPlaque® GTG® Agarose is ideally suited for direct enzymatic manipulation of nucleic acids in remelted agarose. SeaPlaque® GTG® Agarose is tested and certified for ligation-transformation and restriction digestion using remelted agarose protocols.

Analytical Specifications
- Gelling temperature (1.5%) 26°C-30°C
- Melting temperature (1.5%) <65°C
- Gel Strength (1%) ≥200 g/cm²

Applications
- Electrophoresis of DNA fragments >1,000 bp
- Separation and recovery of megabase-sized DNA fragments with β-Agarase
- Direct enzymatic manipulation of DNA in remelted agarose

Suggested Agarose Concentrations

Precautions
Always wear eye protection when dissolving agarose and guard yourself and others against scalding solutions. Refer to Material Safety Data Sheet for additional safety and handling information.

Microwave Instructions for Agarose Preparation
1. Choose a beaker that is 2-4 times the volume of the solution.
2. Add room temperature 1X or 0.5X electrophoresis buffer and a stir bar to the beaker.
3. Slowly sprinkle in the agarose powder while the solution is rapidly stirred.
4. Remove the stir bar if not Teflon® coated.
5. Weigh the beaker and solution before heating.
6. Cover the beaker with plastic wrap.
7. Pierce a small hole in the plastic wrap for ventilation.
8. Heat the beaker in the microwave oven on High power until bubbles appear.
9. Remove the beaker from the microwave oven. 
   Caution: Any microwaved solution may become superheated and foam over when agitated.
10. GENTLY swirl the beaker to resuspend any settled powder and gel pieces.
11. Reheat the beaker on HIGH power until the solution comes to a boil.
12. Hold at boiling point for 1 minute or until all of the particles are dissolved.
13. Remove the beaker from the microwave oven.
14. GENTLY swirl the beaker to thoroughly mix the agarose solution.
15. After dissolution, add sufficient hot distilled water to obtain the initial weight.
16. Mix thoroughly.
17. Cool the solution to 50°C-60°C prior to casting.
Hot Plate Instructions for Agarose Preparation

1. Choose a beaker that is 2-4 times the volume of the solution.
2. Add room temperature electrophoresis buffer and a stir bar to the beaker.
3. Slowly sprinkle the agarose powder while the solution is rapidly stirred.
4. Weigh the beaker and solution before heating.
5. Cover the beaker with plastic wrap.
6. Pierce a small hole in the plastic wrap for ventilation.
7. Bring the solution to a boil while stirring.
8. Maintain gentle boiling until all the agarose is dissolved (approximately 10 minutes).
9. Add sufficient hot distilled water to obtain the initial weight.
10. Mix thoroughly.
11. Cool the solution to 50°C-60°C prior to casting.
